UNIT OVERVIEW

2.1 INTRODUCTION

After recording the transactions in the journal, recorded entries are classified and grouped into by preparation of accounts. The book which contains all set of accounts (viz. personal, real and nominal accounts), is known as Ledger. It is known as principal books of account in which account-wise balance of each account is determined.

2.2 SPECIMEN OF LEDGER ACCOUNTS

A ledger account has two sides-debit (left part of the account) and credit (right part of the account). Each of the debit and credit side has four columns. (i) Date (ii) Particulars (iii) Journal folio i.e. page from where the entries are taken for posting and (iv) Amount.

2.3 POSTING

The process of transferring the debit and credit items from journal to classified accounts in the ledger is known as posting.

2.1 RULES REGARDING POSTING OF ENTRIES IN THE LEDGER

1. Separate account is opened in ledger book for each account and entries from ledger posted to respective account accordingly.
2. It is a practice to use words 'To' and 'By' while posting transactions in the ledger. The word 'To' is used in the particular column with the accounts written on the debit side while 'By' is used with the accounts written in the particular column of the credit side. These 'To' and 'By' do not have any meanings but are used to the account debited and credited.
3. The concerned account debited in the journal should also be debited in the ledger but reference should be of the respective credit account.

2.4 BALANCING AN ACCOUNT

At the end of the each month or year or any particular day it may be necessary to ascertain the balance in an account. This is not a too difficult thing to do; suppose a person has bought goods worth ₹1,000 and has paid only ₹ 850; he owes ₹150 and that is balance in his account. To ascertain the balance in any account, what is done is to total the sides and ascertain the difference; the difference is the balance. If the credit side

is bigger than the debit side, it is a credit balance. In the other case it is a debit balance. The credit balance is written on the debit side as, "To Balance c/d"; c/d means "carried down". By doing this, two sides will be equal. The totals are written on the two sides opposite one another.

Then the credit balance is written on the credit side as "By balance b/d (i.e., brought down)". This is the opening balance for the new period. The debit balance similarly is written on the credit side as "By Balance c/d", the totals then are written on the two sides as shown above as then the debit balance written on the debit side as, "To Balance b/d", as the opening balance of the new period.

It should be noted that nominal accounts are not balanced; the balance in the end are transferred to the profit and loss account. Only personal and real accounts ultimately show balances. In the illustrations given, you will have notice that the capital account, the purchases account, sales account, the discount account, the rent account and the salary account have not been balanced. The capital account will have to be adjusted for profit or loss and that is why it has not been balanced yet.
